

THE FINAL SOLUTION FOR THE DEVELOPMENT OF SMART ELECTRICITY GRIDS

ABOUT US

We specialise in the design and manufacture of distribution and power transformers endorsed by our many years of experience. Innovation is in our DNA.

100% of the raw materials used to manufacture our transformers are totally recyclable, and the design also complies with all the eco-efficiency standards.

1

GREATER VERSATILITY

The best option for load and voltage fluctuations, overloads and integration of renewable energies and distributed generation.

2

ERGONOMIC AND EASY TO IMPLEMENT

The new i-TRAFO is compact, autonomous and easy to install in any transformation centre.

3

ADAPTED TO YOUR REQUIREMENTS

Customised manufacture based on the customer's requirements.

CHARACTERISTICS i·TRAFO

ADVANTAGES

- i·TRAFO makes possible to control its work and modify it remotely, achieving constant and automatic adaptation to the grid voltage changes.
- The i·TRAFO sensors monitor the transformer 24/7.
- It improves the quality of the supply and customer care, making the energy consumption more efficient.

INCLUDING

- Scalable remote control and monitoring options.
- Option of integrating into Liquid K (biodegradable vegetable esters), making it possible to avoid fire-fighting systems.
